

REDBIRDS **MOVE FORWARD** with the COVID-19 vaccine

THE COVID-19 VACCINE IS SAFE AND EFFECTIVE.

- The vaccine underwent careful testing by medical experts through large clinical trials and was proven up to 95% effective.
- The Food and Drug Administration (FDA) has authorized the vaccine for emergency use.
- You cannot get COVID-19 from the vaccine.

THE BENEFITS OF THE COVID-19 VACCINE ARE NUMEROUS.

- The vaccine is a safe way to build protection against COVID-19 and its variants for yourself and those around you.
- The combination of getting vaccinated and following recommended safety measures such as wearing face coverings and physical distancing will offer the best protection from COVID-19 and help stop the pandemic.
- Fully vaccinated individuals can refrain from quarantine and testing following a known exposure if they are asymptomatic.

WHAT TO EXPECT WHEN IT'S YOUR TURN TO GET THE COVID-19 VACCINE

- A second dose is needed approximately 3-4 weeks after your first shot. You are considered fully vaccinated for COVID-19 two weeks after you have received your final dose.
- You may experience some minor side effects, which is a normal sign that the body is building protection. Side effects may include flu-like symptoms (fever, chills, fatigue, headache) and/or pain and discomfort at the injection site.
- You should receive a fact sheet with more information about the specific vaccine and a vaccination card that tells you what COVID-19 vaccine you received, and the date and location you received it. Keep this card safe and do not share its details on social media.
